If This, Then That Rules For Advertising - Standard Operating Procedure

Presented By Jeremy Haynes

Department: Media Buyer / Advertiser

Estimated Time: Random depending on problem that needs solved

Goal/Intention: Give clarity for different problems you may come across in the ads manager, and what actions should be taken given a specific set of data presents itself.

Tools Needed:

- Ads manager access
- Login access to any analytic tools
- Login access to any funnel builder tools or wherever websites can be edited

Problem - Low Conversions:

1. The first step if this happens is to find the bottleneck in the funnel
2. This requires looking at the ad data like CTR and total click volume, and then looking at each step of data for all steps throughout the funnel
    a. Good CTR is above 2%
3. Ideally you're using clickfunnels so you can see the data in the dashboard easily for each step of the funnel
    a. Let's say you have 1,000 people that hit your opt in page, and 100 opted in, that's a 10% conversion rate for that step, 100 divided by 1000 to get 10%
    b. Let's say this is a webinar funnel, and that the webinar page has 98 people that hit after opting in, and only 12 get to the order page of the funnel
        i. That means there is only 12% of the people who opt in for the webinar, hitting the order page - 12 divided by 98 to get 12.2%
    c. Let's say out of those 12, 2 people purchase
        i. that means there is a 16% conversion rate from order form to purchase, 2 divided by 12 to get 16%
4. From there you can also factor in any up-sells and there conversion rates
5. Once done, you'll get a perspective on where the choke point of the funnel is
6. And as a marketer you're objective should be to put attention on wherever the choke point is to increase conversion throughout the rest of the funnel, and then repeat this

until the desired KPI conversion rates are met throughout the entire process of ads to end step in the funnel

Problem - CTR is less than 2%:

1. If you're click through rate on a given funnel is too low, sub 2%, then this problem is relatively simple to solve
2. You need to rotate in new creatives on an every 72 hour basis until the CTR is higher than 2%
3. You could rotate in new headlines, new body copy, new images or videos, you could leverage dynamic creative vs static creative - essentially any changes are good changes when you're below 2% CTR and in the testing phase of an ad
    a. One important caveat to mention, is that if you're ads are profitable and still below sub 2% CTR, there is no need to change the creatives in that given campaign, it'd be best to duplicate that campaign, test new audiences with the same creative to see if it will also be profitable or have a higher CTR than 2%
        i. Never turn something off that is profitable
4. Some tools for clients that have limited availability or suck at making new image or videos to leverage, are tools like shakr.com or tools like canva.com to easily create video and image variations without needing the client to create new assets if there's anything that holds that process back

Problem - Learning Limited:

1. If you enter the learning limited phase of an ad set, it is Facebook or Adwords indicating to you that you do not have a sufficient amount of conversions for whatever you're optimizing your campaigns for.
2. What then happens is the algorithms don't know who to confidently go after out of everyone you're targeting because there's not enough data to reenforce the machine learning model that underlays the advertising platforms
3. There's a few processes you could implement, some longer than others and some simpler than others
4. Process one would be to simply relaunch that ad set if you're optimizing for ad set budget optimization IF you got close to the numbers of conversions in a week you need to hit to exit said learning phase
    a. This gives a high probability that you will exit since you got close upon the initial launch of the campaign, but missed by only a few conversions
5. If you were way short of the number you needed to hit to exit the learning phase, then you need to consider going over the first problem in this SOP, which is to find the bottleneck throughout your funnel and fix it - and then intend to relaunch after as another test

6. If you're not seeing any results after a few pivots in your funnel in an attempt to increase your conversions overall in the funnel itself, another good solution could be to test new audiences with the best performing creatives out of everything tested so far
    a. This will give you a clear indication of whether you're not seeing enough conversions to exit the learning phase due to the audience attempting to be targeted not responding to the creatives or funnel type you're marketing to them
7. Another great solution to exiting the learning phase is to run cyclic campaigns.
    a. There is a training on this in DSP - Digital Skill Pack and also in the high ticket agency course in the social media advertising module.
    b. The intention of a cyclic campaign is to run campaigns optimized for each step of the funnel leveraging a different standard event relative to the step of the funnel.
        i. An example would be optimizing an ecom store funnel for purchase, then duplicating that campaign and optimizing for the step above it as well like add to cart or initiate checkout, then duplicating that campaign and optimizing for view content or whatever standard event is above that 2nd to last step in your funnel flow
        ii. In an application funnel campaign, you could optimize for the furthest down the funnel step being complete registration or schedule call, and then dupe out the campaign and optimize for submit application, then dupe it out again and optimize for lead
            1. This will ultimately help you get more data throughout all steps of the funnel, and will help you exit the learning phase faster so you can get more reach and a higher volume of cost effective conversions for whatever you're attempting to advertise
8. Pro tip with the learning phase - understand machine learning and WHY Facebook or Adwords is indicating this to you, so you can understand the importance of why to properly exit leveraging these tactics above.

Problem - CPA cost is too high:

1. When your cost per action is too high for whatever you're optimizing your campaigns for, there are a lot of variables that could be causing this issue, we will go through them in this step together for troubleshooting
2. First is the audiences being targeted are too small, and you're spending too much to target them with automated bidding
    a. This problem will happen for audiences sizing less than 1,000,000 people
        i. Easiest fix here is to widen the amount of people being targeted
        ii. If that's not possible, then considering dropping the daily budget 20% until CPA is lower and then scaling back up again 10-20% daily until desired CPA is conditioned

iii. You could also run a manual bid campaign and see if you get reach at the desired CPA you're attempting to hit with the small audience to see if it's even possible to achieve at the rate you're looking for conversions at

3. CPA can also be high if you're targeting a hyper targeted demographic.
    a. In Q4 of 2020 there was a tense election where swing voters and swing states were being targeted aggressively, and Covid-19 happened that year which caused for a HUGE increase of ecommerce spend in Q4 and retailers who got fucked all year not being able to convert their usual customers in stores relying on the Q4 season to make up for that revenue
        i. We switched to manual bid campaigns, and would run a campaign at $200/day as an example budget with a $50/bid cap, and every 2 hours I'd monitor reach of those campaigns
        ii. If we weren't getting the desired reach, therefore throttling conversions, we'd bump the bid cap $10 every 2 hours until we started getting reach
        iii. Then we'd increase the daily spend by whatever each cost per conversion was
        iv. So if our daily budget was $200/day and we got the first conversion at $40, our new daily budget would get bumped to $240, etc for each additional conversion
        v. Once the reach stopped or got throttled again, we knew that we cleared out everyone that day available in the bid cap range and we'd bump it another $10/bid cap to clear out the next range of higher cost customers
            1. This strategy works for any hyper competitive demographics you might be targeting that you are intending to scale with a high volume of consumers, but you want to maintain an ideal CPA
            2. It also helps to know the exact amount you're going to need to spend per conversion, so you can make adjustments on the backend to pricing so you're still profitable
    b. It's important to note for this strategy that you are going to want to ensure you're duplicating campaigns and testing new audiences, ideally broad audiences so you don't run out of ideal CPA buyers in a given range before having to bump to a bid cap above your desired KPI
4. CPAs can also jump through the roof if you scale a campaign wrong
    a. Any campaign that leverages automated bidding and is scaled more than 10-30% in a given daily budget increase is susceptible to drastic increases in CPA costs.
    b. The solution if you want to scale a campaign from let's say $200/day to $1,000/day is to duplicate out the $200/day campaign and set the budget on the newly created campaign to $1,000/day, once approved you shut off the $200/day campaign so you avoid audience overlap
5. Also important to test new audiences to see if you a given audience you're attempting to target is a higher CPA than another one being tested

Problem - High no show rate on scheduled calls:

1. 20% or less no show rate is good, 30% is ok, anything above 35% is unacceptable and costing you or your clients big money, and most marketers don't increase their cost per scheduled call by adding the inflated cost of no shows to it
2. The best actions for decreasing no show rates start by auditing the marketing automation
    a. In most cases, marketing automation is left generic with basic reminders
    b. This is a great part of the follow up pre call sequence that can be used to pepper in some testimonials and to treat these emails as a resell to why they need to show up each reminder that's sent
3. Be sure to leverage text based reminders as well
    a. Add an option to collect phone number in the scheduler if you're not already doing this anyway
4. Send a video text IMMEDIATELY after an application OR scheduled call comes in from the closer
    a. This is a real, custom video text that gets sent to the applicant or scheduled caller that implies they are excited to chat, wanted to face to the person they'll be speaking with that's going to help them, and to send any questions over between now and the call time
        i. Best sent from iPhones, as iPhones don't reduce the quality of the video text
        ii. Can also be sent over DMs to the persons social media if the closer doesn't have an iPhone so there's no excuses not to send a video message
5. Run a retargeting campaign with a contextual set of content that directly states "were excited to help now that you've scheduled a call with us, here's something you can do/become aware of/some things to expect on the call together" type piece of content
    a. This is a low budget daily spend campaign that takes $5-$10 that increases the overall effectiveness of each scheduled caller before they show up
    b. Needs to be an audience of at least 100 to work, so really only effective if you have more than 100 callers in a given period of time between scheduled and the call itself for this audience
6. Another important step in decreasing the no show rate is to have a final step in the funnel that acts as a confirmation step
    a. This should have VSL that explainers what to expect on the call and congratulating them on getting a step closer to solving or dealing with X
    b. Also a great page to add testimonials to for further framing to get the person more committed to showing up for the call
7. All of this in combination generally keeps the no shows below 20%

Problem - A lot of add to carts, but few sales:

1. Typically most order forms or check out pages lack general best practices for conversion rate optimization, this will act as a list of what to do so you get some ideas of actions to implement to get more people buying
2. If you're running a Shopify store, or a site with another Facebook or google marketing partner like marketo or woocommerce, you can set up a catalog feed that takes all the products and products categories and allows you to run "dynamic product retargeting ads"
    a. This shows people who went and viewed a product, or added to cart and didn't buy, or those who bought and can be cross sold a set of products that are within the same product category or similar to the product category of what they previously browsed, added to cart or bought to bring them back to the store with the highest probability
3. You can leverage green call to action buttons for higher conversion rates on order forms and closing pages
4. Add support options like email and phone number on page for additional trust
    a. Adding an address to the site has also been showed to increase user trust
5. Adding easy to read testimonials that are short and formatted like tweets help conversions
6. Having an FAQ section acts as a digital objection handling section where you can address the objections customers may have in a list to increase conversions
7. Visualizing products or adding influencer/customer unboxing videos can help with conversions
8. Adding a live chat feature in bottom right corner helps
9. Adding clear shipping times or doing free shipping typically helps with conversions for physical products
10. Using tools like useproof.com or enabling "digital table rush" on Clickfunnels can increase conversions as it shows everyone else who is buying with a small pop up in the bottom left corner, you can leverage total quantity of site visitors with useproof.com which can be great social proof for high traffic stores
11. Adding trust icons like this can help:
    a.

12. All of these can add single digit increases in conversion % rates, in combination with one another these are hyper effective

Problem - Lots of scheduled calls, but few are getting closed:

1. This has to do with framing, lead quality, lead quantity or closer quality generally more than anything else
2. To deal with framing, see below in following “if this then that” problem for lead framing solutions
3. Lead quality can also be solved typically with framing solutions, but it can also come from the wrong hook going in front of the right audience, or the right hook going in front of the wrong or unqualified audiences
    a. For this, you’ll want to test new hooks if you’re sold you’re getting in front of the right people
    b. If you’re not sold you’re getting in front of the right audiences, test new audiences with the same hooks and then gauge the lead quality again
4. Lead quality can be solved by increasing spend on existing successful campaigns to get a larger data sample to expose the real problems, or by taking existing successful ads and running them in conjunction with existing successful campaigns alongside some new campaigns targeting different audiences
5. Dealing with closers and best practices for sales people can be done with these strategies:
    a. youtube.com/watch?v=Fl4Sh5yLYJE

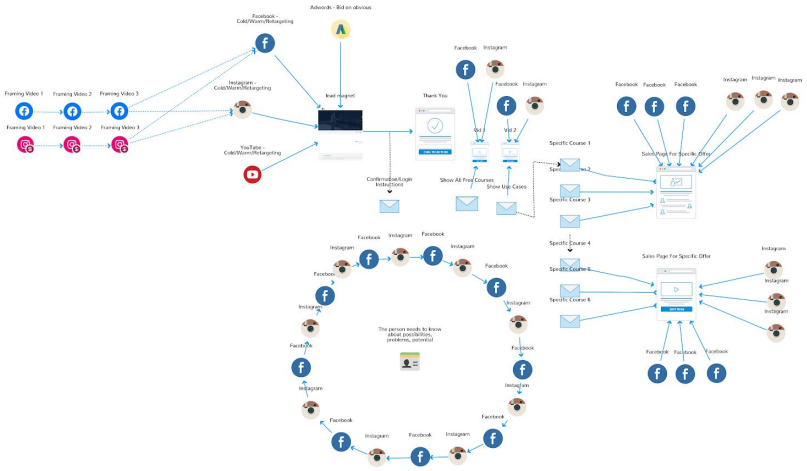
Problem - Leads aren’t coming in framed properly:

1. This is where you need to look at your campaign entirely to audit where something could be off or whats completely missing
    a. Best to go through it like a customer you want to sell
    b. Start with the ads, work your way into the funnel watch the videos if any, and schedule out a call or call the business if there’s no scheduler like secrets shoppers would do at retailers. Find what’s off in the marketing automation, and noted everything
        i. You’re looking to get the customer experience first hand, and then to reflect on that experience as a marketer to see what can be improved
        ii. The most common areas are the ads, funnel, marketing automation and sales conversation happening
            1. Also little things like no VSLs (video sales letter) on the pages, this makes huge difference
            2. Also the difference between generic reminder marketing automation vs well written copy in the follow up and reminder sequences
2. Another big campaign shift that can make all the difference on the ad side is the incorporation of framing content throughout the ad campaigns
    a. This is big part of ad strategies I’ve created like the Venus Fly Trap™ and The Harvester™ ad strategies.

b. These strategies incorporate content at all stages of the ad strategy and are attached here below.
c. You'll see within these ad strategies how content can be used for framing initially before the prospect even sees the direct response creatives, and you'll see how content can be leveraged throughout all stages of the funnel for proper framing that's contextual and beneficial for each step of the process.

Venus Fly Trap Ad Strategy

Presented by Jeremy Haynes of Megalodon Marketing



Made For...

Personal Brands, Companies, And Anyone with High Quality Social Media Content That Wants To Post and Maximize Reach On Multiple Social Media Channels, Including Facebook, Instagram, Twitter, LinkedIn and Youtube.

The intention of the Venus Fly Trap ad strategy, is to get future buyers of products indoctrinated from not knowing you (cold audience), to knowing about you and having the right bias's, beliefs and objections handled before and during presenting offers in conversion campaigns.

You're taking a cold audience, and putting content in front of them, with no pitches or call to actions, with engagement campaigns and video view objectives in the Facebook ads manager, and then leveraging the Facebook audience tool to capture video viewers and those interacted with your Facebook and Instagram pages and posts.

How it works:
You're creating a video sequence for ideal future customers to go through, and then you're running your direct response conversion ads and retargeting at them after they go from not knowing you, to knowing you from this strategically laid out set of videos.

You are going to pick 3 videos in total, for videos 1, 2 and 3 and post them to your Facebook page. Ideally they are 1-3 minutes in length. We will go over what each video needs to contain to establish the right bias's and to prime the potential future buyers correctly.

After you've got your 3 videos, you're going to select 3-8 videos that help to manage the beliefs and the future objections the potential buyers will have, to increase the probability of them buying and responding to your direct response ads when they see them start being targeted towards them after they've watched the initial 3.

You'll also need the direct response ads. Ideally you're going to create 3-5 different hooks and angles to execute on for the direct response ads, and 3-5 retargeting videos with different hooks and angles as well. This array of different hooks and angles are going to be the different selling points and buying motives of those being targeted, because not everybody is sold on the same selling points.

Why it works:
The Venus Fly Trap advertising strategy works great at increasing the chances of those being targeted to buy, it also lowers the cost of your conversions because you're only targeting 'warm audiences' who know who you are and ideally have the right frame of mind to buy your products comoe time you start making pitches. In addition, you're building a brand that has a lot of social proof from all the views, likes, comments and shares that all of your content will have, which also increases the probability of others buying from you that you are targeting.

Lastly, you're lowering your advertising costs significantly, due to cost per engagement and cost per video views averaging to $.01-$.02 whereas conversion campaigns that take users you're targeting off of FB or IG, costs an average of $.50-$2.00 and has a much lower probability of converting considering the audience's being targeted have no idea who you are and don't usually care about you at all at that stage of marketing.

In addition to the initial video sequence, I like to keep a consistent set of content to manage beliefs and handle future objections in front of all warm audience members. This is typically done with 10-20 different pieces of strategic content that we run

engagement campaigns and video view campaigns towards warm audience traffic to keep people warmed up, engaged and consistently framed. We call this the content cycle bin. It's the part of the image with the big circle of FB and IG content circling a user.

To summarize, the Venus Fly trap lowers your ad costs, qualifies cold audiences into warm audiences faster and cheaper than direct response marketing, and increase the probability of those you are targeting with conversion campaigns to actually want to buy from you.

Now let's move into the technicals of what you are going to need and how you are going to need to set this up correctly.

The Process:
You're going to need the following videos below. Each one will be labeled with the objective you need to pair it with in Facebook, being labeled as 'Video Views' "Engagement" or 'Conversions" which each represent the actual objective in the Facebook Ads Manager.

See the 'Creating, Posting and Promoting Social Media Content document for best practices on the content creation, and styles of best practices,

Video 1: Engagement Objective & Video View Objective Optimized For Thruplay
Video 1 is meant to establish the authority bias, social proof bias, and to establish something of very broad value, absolutely no call to actions. Ideal length is 1-3 min.

You are targeting cold audiences with video 1, all audiences targeted should be the same audiences you would use for a direct response marketing campaign. Target your ideal future buyers. Always remember that these people do not know you, and they do not care about you. Your goal is to get them to 10 seconds of the video, because the average amount of time spent on a post in the news feed is currently 1.8 seconds.

Some examples of video 1:

- http://facebook.com/DanLokOfficial/videos/2113255575383819/
- http://facebook.com/DanLokOfficial/videos/2146147352094641/
- http://facebook.com/DanLokOfficial/videos/2150915104951199/

Video 2: Engagement Objective & Video View Objective Optimized For Thruplay

Video 2 is intended to establish the brand promise in a subliminal way. In other words, you want to make the biggest claim, or boldest statement that your entire solution you offer in business caters to. You also want to plant and relate to deep buying motives that drive your potential customer. This can be done through value-driven content with the two elements above factored in. Also be sure to leverage the curiosity bias here by being so valuable, that person is driven to think about how they hadn't known about you before, from how much impact you have on them here.

The main intention of video 2 is to establish your positioning, which is a big step.

Video #2's in the sequence for examples:

- http://facebook.com/DanLokOfficial/videos/2104753242900719/
- http://facebook.com/DanLokOfficial/videos/2113211625388214/

- http://facebook.com/DanLokOfficial/videos/2148304598545583/

Video 3.1: Engagement Objective & Video View Objective Optimized For Thruplay
With video 3 you should test 3-5 different forms of 'category content'. The best example here is the rotisserie chicken in Grocery stores. People do not buy for one reason. Imagine if a grocery store only catered to their marketing messages to 1 type of buyer, like the family that just doesn't want to cook that night, or only marketing to the fitness-oriented buyer who wants the rotisserie chicken for all the calories and protein, or only marketing to the person on a lunch break bringing it back for their co-workers. It wouldn't sell as much just as your products won't sell as much if you only market towards 1 buyer. In truth, you likely have 20 different deep buying motives in your buyers that can correlate into hooks and angels for your content.

The main intention of video #3 is to start managing the beliefs of your potential buyers, and peppering in some of the categories you need manage and that your business solutions cater to. As an example, if I have mindset courses, marketing courses, and accounting courses, the 3 different categories could easily become known to my future potential buyers I'm targeting with this content being broken down into stories that manage the beliefs and make our categories known at the same time. That's why you

see 3.1, 3.2, and 3.3 - because 3 categories is the minimum amount of video 3's you're going to need.

Video #3's that prime people to be advertised to, still content:

Video 3.3: Engagement Objective & Video View Objective Optimized For Thruplay
See 3.1 explanation

Conversion Ad 1:
Now you're going to make your pitch. Create 3-5 variations, use different hooks and angles. These only go in front of the people that you've just taken from cold, to 'warm audiences' now with from leveraging the content sequence you deployed. Simple direct response marketing.

Great CTA Videos for after people are warmed up:
https://www.facebook.com/TheJeremyHaynes/videos/478670142508781/
https://www.facebook.com/coachleehaight/videos/961444880678706/
Here are examples of different ads for call to actions too:

- **60 second video for people who don't know you** - Make a 60 second video going over the problems your ideal customer or client has. 3-4 problems, then talk about your free thing or product being available and go right into the results (3-4 results) the person gets if they take action by pressing the button in the bottom right corner or by clicking the link above.

1. ex: http://fb.me/1R0kbOYE31RkwpW
2. ex: http://fb.me/29C6evTGd17D7Ht

- **2 minute video for people who don't know you** - 3-4 problems, free thing or product being available, 3-4 results or solutions that happen when the person takes action by

pressing the button in the bottom corner or by pressing the link above. You can also story tell plugging the same format.

1. ex: http://fb.me/1IVsENC2rSDgg7g
2. ex: http://fb.me/26CJDXobn60NZPm
3. ex: http://fb.me/1Ix6L1ZaAfFryC5

- **4 retargeting videos** - Story tell, directly call out, or bring up different problems the potential customer, client, or lead are experiencing but go into detail on it more, and then relate it the solution and results they could get with the thing they've seen but haven't taken action on yet. Also feel free to call out actions you know they've taken like viewed offer pages, watched ad videos, seen these things several times but haven't taken action yet to better themselves, etc.

1. ex: http://fb.me/bofGplpuPWvyEz
2. ex: http://fb.me/9eIFeb1PD3GVv4
3. ex: http://fb.me/8P7HUoGVV8fM6W
4. ex: http://fb.me/1WRXymV5lJMl47Z
5. ex: http://fb.me/1IaBlb9EqcYqtFo
6. ex: http://fb.me/9e8oI3zRmHDCgw
7. ex: http://fb.me/25ZfzRUF4Bui5YV
8. ex: http://fb.me/bchjlVgWSsAR2C

- **2 15 second vertical video for instastories** - These need to be quick, your call to action is for them to swipe up, and you're either quickly covering 1-2 problems and the solution or results (1-2) being possible by swiping up, or creatively get them to swipe up to get xyz.

1. ex: http://fb.me/2dSloT1IuwlO3i8
2. ex: http://fb.me/bN9D7HYU1SmP16
3.
4. ex: http://fb.me/23etdeDDOHODHxS
5. ex: http://fb.me/8QfsG8C1fH0orV

- **2 retargeting videos for insta stories 15 seconds and vertical** - if someone doesn't take action on a giveaway or a product/offer, they are going to be retargeted until they do. In under 15 seconds be sure to tell them to swipe up to take action on getting the thing that they forgot to take action on and why in under 15 seconds.

1. ex: http://fb.me/1QqE1AHHaEM9rWv
2. ex: http://fb.me/2eVXhhlqqPfl6nE
3. ex: http://fb.me/1O8p9Fjts7VwBsD
4. ex: http://fb.me/1FoFn9dA6YTPVv1

- **simple 'you didn't buy, come back and take action video'** - This is a direct call out that the person seeing this video saw an offer, ad video or opportunity to take action to get something for free from you, or to get a product or offer that they didn't buy. Call them out creatively on the fact that they didn't do what they needed to do to get themselves to the state where they get the 3-4 results you're going to remind they can

get through these videos where you're calling them out and then reminding them to take action by pressing the button below or pressing the link above to get xyz.

More Videos 4: Engagement Objective & Video View Objective Optimized For Thruplay
'More Videos' being posted on your Facebook and Instagram means that you intend on leveraging content to maintain ongoing belief management and objection handling through said content being posted. This step ensures that while your ideal customers are now being pitched, that they are also having value-driven content kept in front of them to retain an omnipresent effect, and to ensure they do not become conditioned to ignore your ads from over pitching.

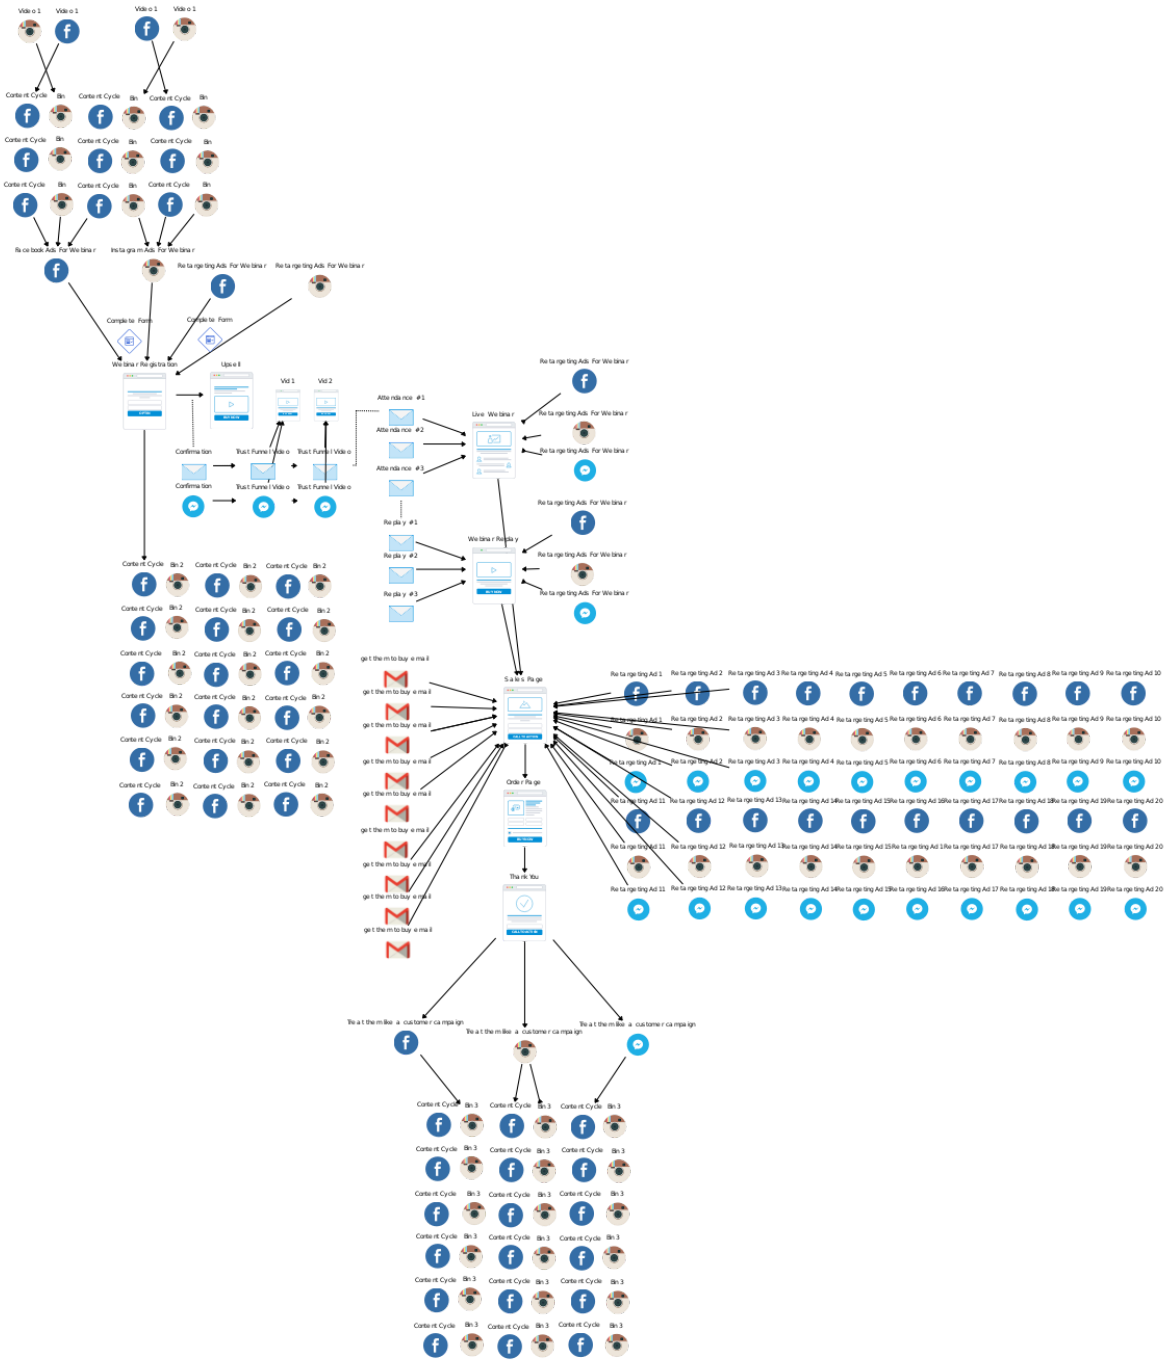
‘The Harvester’ Ad Strategy

Presented by Jeremy Haynes of Megalodon Marketing



Why Is This Called ‘The Harvester’?

Most advertisers, marketers and entrepreneurs go straight for the close in their marketing efforts. They just pitch pitch and pitch to the same audience or a few different audiences hoping and praying they can convert 2% of the audiences they are targeting to barely profit.

If we compare those types of advertisers to farmers, they would be the types of farmers that go straight for the harvest, and would completely ignore the rest of harvest cycle, which includes key stages like planting, tending, watering, and letting the crops grow before harvesting, and managing multiple crop fields at one time to enable more profits are scale when harvesting.

You see, when you're a farmer who works at scale, you can run out of crops in one field if you're only harvesting all the time and ignoring the other parts of the harvesting cycle. The same goes with advertisers..

We can run out of customers to generate from a specific market if we are only trying to convert the ones are ready to make a transaction with our businesses. We need to be focused on the rest of the sales cycle too, which includes making people aware of us, then trusting us and finding commonality with our brands so we can convert them in shorter periods of time, but at the right time when they are later ready to transact with us.

I learned a key lesson the hard way at scale that lead me to creating this ad strategy out of a need for more customers to convert at scale that would remain an evergreen solution for heavy clients. Use this wisely, not for small advertisers with low budgets.

Made For...

Personal Brands, Companies, And Anyone with High Quality Social Media Content That Wants To Post and Maximize Reach On Multiple Social Media Channels, Including Facebook, Instagram, Twitter, LinkedIn and Youtube. This ad strategy is for those at scale, who want an evergreen ad strategy that can be scaled to millions in ad spend each month.

The intention of 'the Harvester' ad strategy, is to consistently enable the company using the strategy to have an evergreen 'field' of customers to harvest from. Most marketers and entrepreneurs go straight for the kill with direct response marketing, disrespecting everyone in the sales process.

In the game of direct response marketing, you're the equivalent of a mall sales person, just pitching anyone while crossing your fingers you're going to convert 2% of your audience. Meanwhile you're disrespecting and burning your ability to generate positive brand impressions with 98% of your targeted audience, just like you get in the mall when you're minding your business and someone comes up and starts pitching you on something you may not even be qualified for.

The harvester ad strategy is the modern day, evergreen ad strategy that you can deploy at scale to convert customers who are ready to convert, while generating new customers who build trust with your brand rapidly, later becoming available to harvest. All while spending ~100X less than your competitors who are leveraging direct response marketing.

The average cost of a video view, thru play, or cost per engagement is going to be around $.001-$.02 while your competition is going to be spending an average of $1.00 driving people to their website, meaning your dollar is literally going 100X-1000X further than their dollar.

Why it works:
Social interaction is now retargetable on Facebook, Instagram, Youtube and LinkedIn, meaning everyone who watches one of your videos, interacts with your pages or posts, messages you, saves posts, etc are all now retargetable.

This is the modern day way to build email lists, but inside of the social media channels for 100X-1000X cheaper while also being able to build hundreds of thousands into a retargetable list in days, and at scale in hours compared to the weeks or months it would take to convert that many people into your email list.

And unlike email marketing, your open rates are going to be near 100% because you'll be right in their newsfeed. Currently 53% of all attention on the internet goes to social media platforms, and 83% of those consuming content online are doing it with videos.

In addition, you are remaining omnipresent and contextual with your messaging in ads throughout the Harvester ad strategy, therefore you'll have an increased probability of converting those you're targeting because you're respecting them in the sales process, framing them with content, and staying in front of them guiding them to the next step in the sales cycle where they left off.

The Process:
You're starting the ad sequence off with a very specific piece of content, we call video 1. In video 1 you're introducing the personality brand or company with a piece of content backed by an engagement campaign and video view campaign targeted towards your ideal audience of customers.

The content is intended to establish curiosity, authority and social proof in under 60 second. Here are a few example of good video 1's:

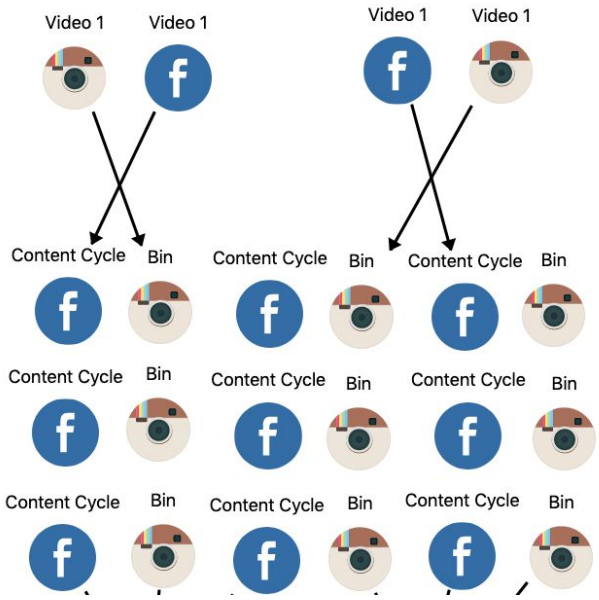
1. https://www.instagram.com/p/BubSZdBhWB0/
2. https://www.facebook.com/DanLokOfficial/videos/641651679616267/
3. https://www.instagram.com/p/Bv0LcMpHxOX/ - disregard CTA at the end for better example of what to do in video 1
4. https://vimeo.com/326225701

I recommend testing 2-3 different video 1's that can be used for targeting your ideal audiences that you want to later convert into customers. Use engagement campaigns and video view campaigns optimized for thruplay and only charging you when a thruplay occurs. Thruplays are when someone reaches 15 seconds in a video.

The reason you're using both thruplay and engagement campaigns is because the algorithm is going to reach two different types of people in the same audience you're targeting in them based on the people in the audience are more likely to do to achieve your objective based on their previous app experience.

Be sure to set up audiences for what we call warm audiences, which are website traffic, social interaction on Facebook and Instagram, and any custom audiences like email lists you want to upload. Set up these audiences with different date ranges, like 5 days, 10 days, and every 5 day increments up to 365 days.

- This will be tedious, but worth it.
- Leverage this tool from Adrian Morrison to create the audiences faster and in bulk: https://audaccelerator.crmsecureorders.com/orderformtrial



Now that you've got your video 1 set up, you're going to want to drive your warm audience to what we're going to call Cycle Bin 1.

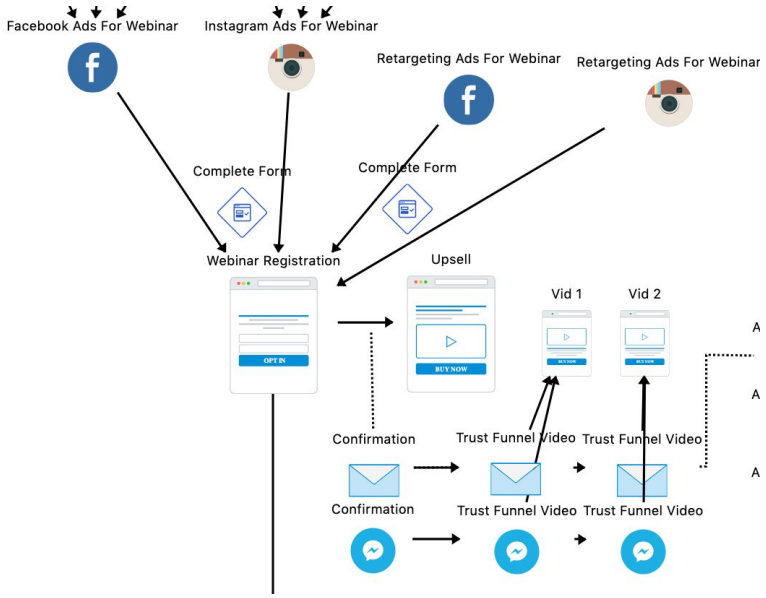
'Cycle Bin' refers to a group of videos that we are going to put in front of specific audiences that frame them, shape their beliefs and viewpoints, and increase our probability that they will respond to our offers and direct response ads.

For cycle bin 1, we need to make this newly added, and recent cold audience group of people warmed up to the brand with the right content. We're looking to establish more authority bias, social proof and shape their beliefs over the next 3-5 days before showing them our direct response ads. The goal KPI should be a frequency of 3-5 in these 3-5 days of showing them content.

You can put as many videos as you want in Content Bin 1 campaign because the AI is going to target the warm audience with videos they are most likely to engage with or watch based on their previous interactions on the social platforms and website interactions they track.

So moral of the story, the audience won't see all 20 videos if that's how many you have in Content Cycle Bin 1, but they will see the right 3-5 they will most likely respond to if you hit the goal KPI for frequency.

The audience you're targeting with Content Cycle Bin 1 is the warm audience that is 3-5 days big. Use the shorter amount of days if you want to crunch the sales cycle or are on a thinner budget. Leverage the Facebook interactions audiences, Instagram interactions audiences, video view audiences, and anything else that represents someone who was cold and became warm in the last 3-5 days.

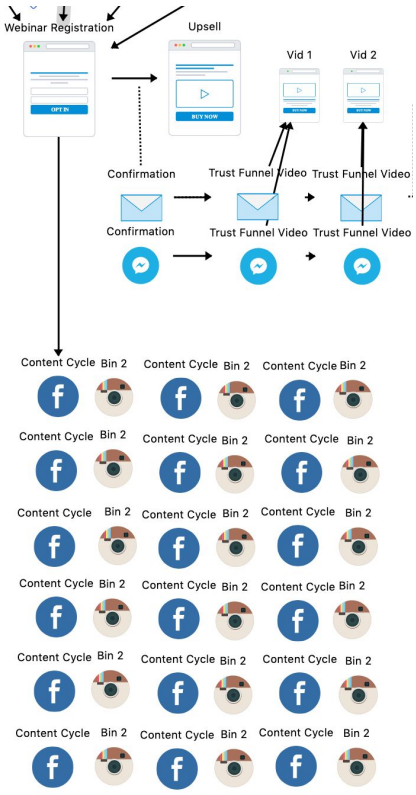


Now get your direct response ads set up, driving people to your lead magnet, or in this case a webinar selling a high ticket product.

Be sure to have your retargeting ads also set up.

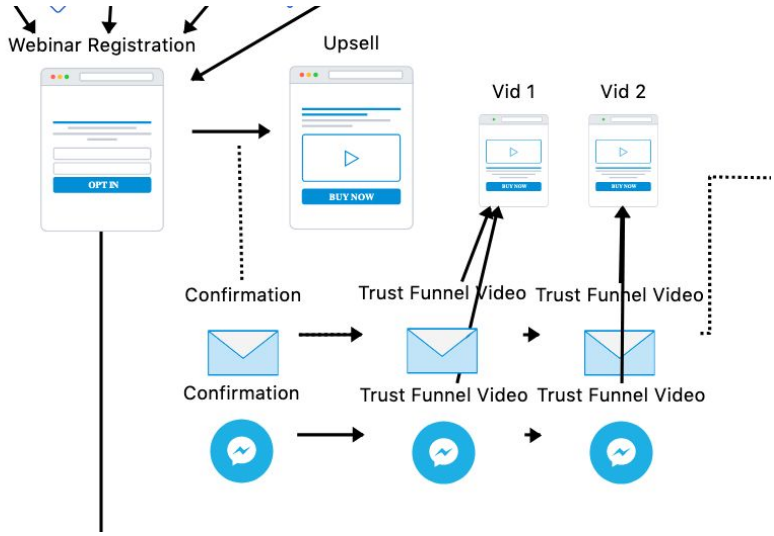
Best practices are to have at least 5-10 variations for each placement built out for your direct response ads for both warm traffic and your retargeting ads. This means build out creative for right side column, Facebook newsfeed, Instagram newsfeed, story placements across Facebook/Instagram/Messenger, Messenger placements, in stream ads, the marketplace, and the audience network.

Your audience for this step is going to be your warm audience of days 5-30.



As you're targeting them with direct response ads now driving them to your webinar, you'll also want to be targeting that same audience with Content Cycle Bin 2.

Follow the same logic as Content Cycle Bin 1, meaning you can use up to 20-25 different videos that help shape their beliefs and manage their perceptions to frame them to view you the best way to have the highest probability to convert them now that they are being targeted with ads and are going to see your high ticket offer.



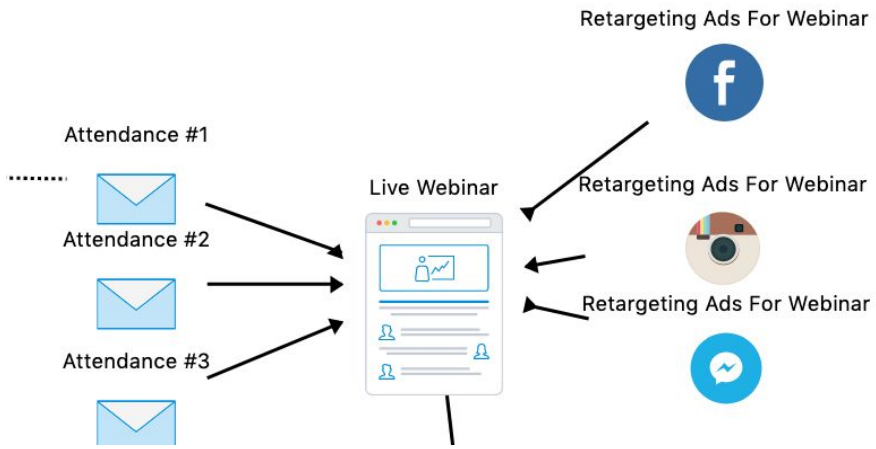
Once someone responds by opting into your webinar or lead magnet, be sure to have a Facebook Messenger opt in from a tool like Manychat.com to enable follow up in email and in messenger. Have marketing automation built out for both.

Leverage a 2 day trust funnel of follow up that sends them videos that are anywhere from 10-20 minutes long with additional value fortifying you're an expert at what you're teaching. An example is Brad Lea leveraging these videos in his trust funnel to solidify his authority by giving value to sales people:

- https://www.facebook.com/TheRealBradLea/videos/355664738417393/
- https://www.facebook.com/TheRealBradLea/videos/370772720190864/
- https://www.facebook.com/TheRealBradLea/videos/402085430592566/

The trust funnel videos can be sent via email and messenger. The videos can contain a CTA to get the main offer being pushed lightly at the end of each video.

If you're leveraging a CTA to schedule a call (which historically converts at much higher closing rates than online sales), be sure to pepper in throughout the video a few times to schedule a call by filling out the application below if the videos will be hosted on a landing page and not posted as regular videos on Facebook.

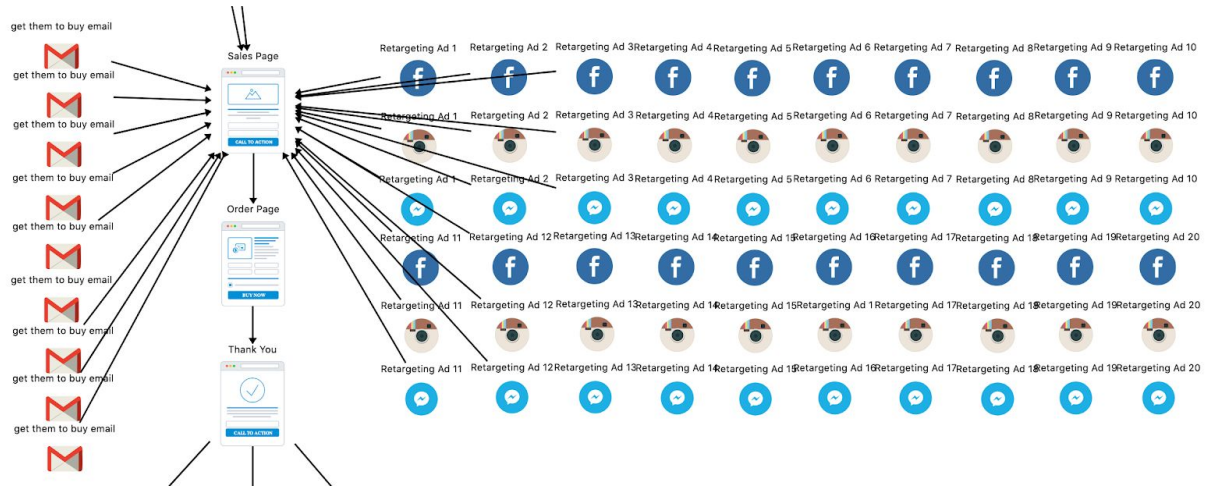


Ideally you're leveraging a webinar funnel where the just in time feature or on demand feature is on so they don't have to schedule at a later date, as attendance rate will increase significantly if on demand is an option. Always test to be sure this is true for your model and audience.

Have audiences set up through https://connectio.io/connectretarget/ to be able to retarget people based on the time they spent on the page. That way you can have audiences set up to enable you contextually speak to the person based on where they stopped in the webinar process.

Examples include:

- On page for less than 30 seconds -> follow up via retargeting with creative that calls them out on not staying to watch, hit them with a few different angles on what you cover and drive them back to the live room
- On page for less than 2 min, 5 min, 10 min, etc for whatever you contextually want to follow up with.
- Don't be lazy with this, this is a massive step that can open a lot more revenue because the more people that watch your webinar, the more revenue you'll likely generate.
- This can also be was on page for more than 60 min, 90 min, and those ads can drive them to the sales page.



Once someone watches the webinar or the webinar replay, they need to buy.

People buy for different reasons when there is more than one reason to buy.

When I ask people why they buy protein powder, it's generally for one or two reasons. To recover, and to get bigger.

When I ask people why they want to buy a lamborghini, I often hear up to 25 reasons, that range from all types of desires and biases.

My point being is that protein power companies have it made easy, they can have simple tag lines and call to actions - like 'recover and get bigger' because that's really all anyone is buying it for anyway, which simplifies their marketing.

Think of Lamborghini though, if they simplified their marketing down to 'go fast' they would 24 other types of buyers who have completely different buying motives like buying for status, or to prove to themselves they could do it, or to show off, or to prove others wrong, etc.

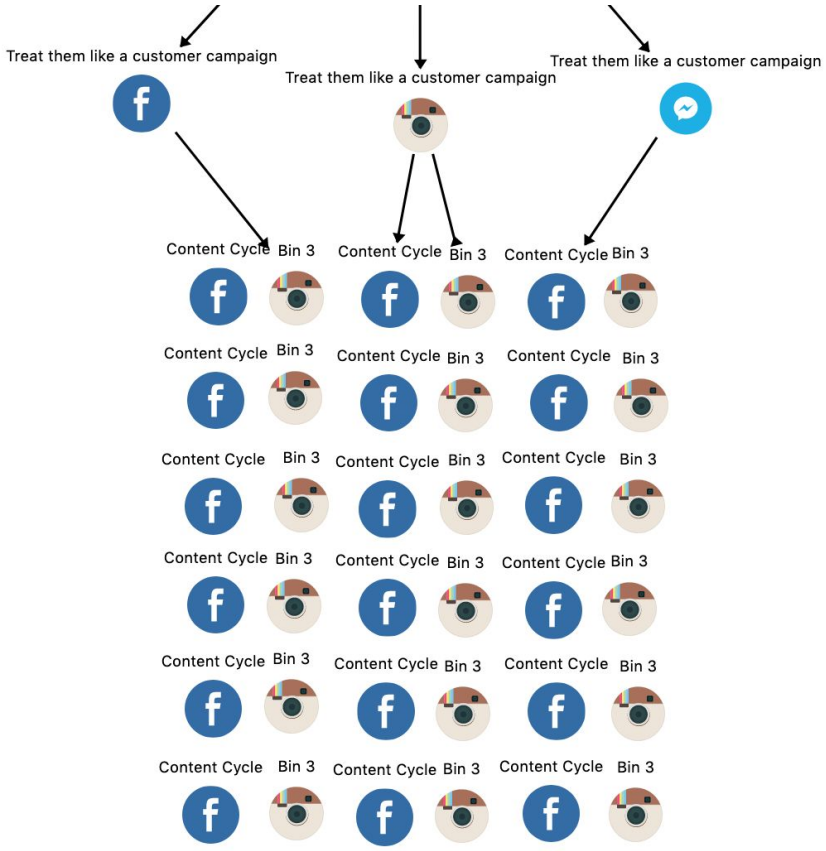
Point being you are most likely in the lamborghini situation, where you need to map out the 20+ different reasons someones actually going to buy your product. And this is very important, really think on this and then execute on creating ads for all placements that you use in a retageting sequence.

The retargeting sequence is a sequence of ads optimized for all placements on Facebook, Instagram and Messenger that are audiences that visited the sales page and

didn't buy with 5-7 day intervals in between the audiences being targeted with each retagreting ad in your sequence until they get targeted with the ad that makes them convert.

That means you're going to have ad sets that are spaced 5-7 days apart from one another with 20+ different creatives that are using 20+ different hooks and angles to attempt to sell the person who went to your sales page and didn't buy. Do the same in email and messenger follow up sequences.

And yes, this retargeting campaign should go for a few weeks up to 180 days, and the reason it's capped at 180 days of leveraging different hooks and angles to attempt to convert your warmest audience, is because that's when FB limits our ability to target past.



Now that you've converted your audience into customers, let's treat them like customers for a few days to maximize the usage of your product, and the strengthen their

relationship with your brand all while increasing the success of them getting results with your product.

These videos and messages should be centered around product demos, customer successes, best practices to get the most out of the product or upcoming information, etc.

Target your thank you page website traffic for a 3-5 day duration and solely treat them like a customer, don't try to upsell them yet as this process is going to increase your chances of converting them and will also lower attrition rate on recurring products if you execute this step.

After you've treated them like a customer, this person is going to be supercharged to interact with your brand. Be sure to keep your brand omnipresent in front of this person. The audience now being targeted with Content Cycle Bin 3 is thank you page website visitors for days 5-180 which you can do by having an audience created for 180 days and excluding an audience of days 1-5.

The content is this specific content cycle bin since they are now a customer is still intended to frame them to view us and the world right way. We just need to keep re-enforcing this new reality they just entered. This a great time to put content in front of them that has your brands values, strong messaging, and core pieces of knowledge they need to have a high probability of buying the products that will be sold to them next.

As an example, if you have a recurring inner circle product, you could feed them content in Content Cycle Bin 3 that relates to how valuable more advanced lessons have been and how much faster you've been able to generate results being closers to the source of the data, and show these lessons being taught where people are in a mastermind setting learning from you but don't pitch the mastermind yet.

A good time to upsell is anywhere from 15 days to 45 days away from the initial purchase depending on the product type.

The harvester is ever green once you set it up, so set it up and enjoy reaping the customers in a healthy harvesting cycle again and again and again. Always be testing!
