DSL - Deck Sales Letter Funnel Strategy

Presented By Jeremy Haynes of Megalodon Marketing & Josh Troy of Wires From Strangers

Made For...

Personal Brands, Ecommerce Stores, Lead Gen Businesses, Service Businesses, Funds and firms raising money, and Anyone with High Quality Social Media Content That Wants To Generate dozens or hundreds of qualified booked calls per day that your sales team will reach out to close.

Overview...

The DSL Funnel Strategy uses the mini webinar 1.0 or 2.0 embedded presentation into the application page in place of a traditional VSL (video sales letter) funnel. This strategy addresses the low play rates of traditional VSL funnels by replacing the video with a deck sales letter that is embedded straight on the page. This allows the consumer to consume the sales presentation at their own pace instead of being controlled by the video format.

The Process...

Step 1: Prepare the Deck Sales Letter - Create a mini webinar 1.0 or 2.0 depending on your business type that effectively communicates the value of your product or service. Ensure that the deck is visually appealing and easy to navigate.

Include a clear call-to-action on the final slide to apply below or to schedule a call below. Service businesses who prefer calls can place their phone number(s) on the final slide.

Mini Webinar Templates:

- Mini Webinar 1.0 Template
- Mini Webinar 2.0 Template
- Make sure to press file > make a copy - so you have your own editable copy

Step 2: Embed the Deck Sales Letter on the Application Page. Replace the traditional VSL video with the embedded deck sales letter on the application page, easiest to just duplicate out your existing VSL funnel and make that one swap for an even split test. Ensure that the deck is fully functional and easy to navigate.

We prefer to use Google slides or Microsoft Powerpoint to embed the slides, you'll find the instructions for that between this step and step 3 instructions below. Test the page to ensure that the deck is working properly.

Here's what the DSL funnel should look like when complete:

Embed Google Slides

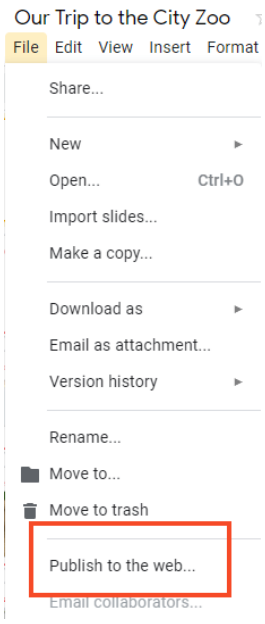
Google offers a range of free, web-based tools within its Google Drive service. One of these is Google Slides.

For teachers and students, Google Slides is one of the most exciting and versatile tools on offer. Read our extensive guide to Google Slides to find out more.

You can easily embed Google Slides into posts and pages using their embed code.

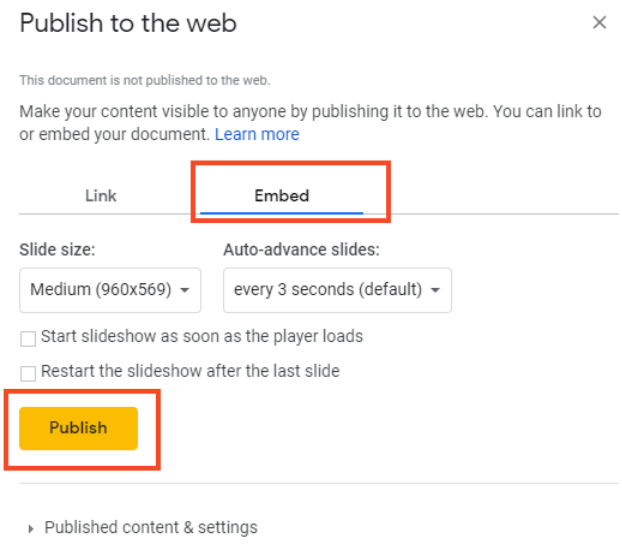
Copy The Embed Code

Open your [Google Slide presentation]() and go to Publish to the Web (under File > Publish to the web).



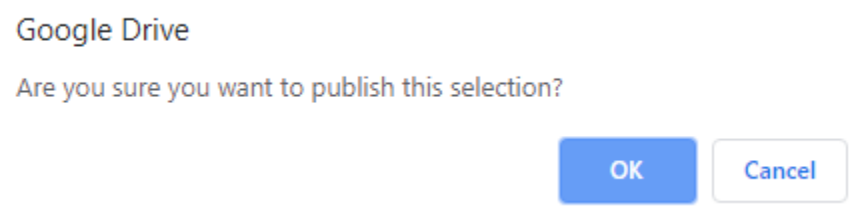
Click on Embed. There are a few options to control the size and speed of the slides. Changing these options isn't essential (medium is usually a good size).

Click on Publish.



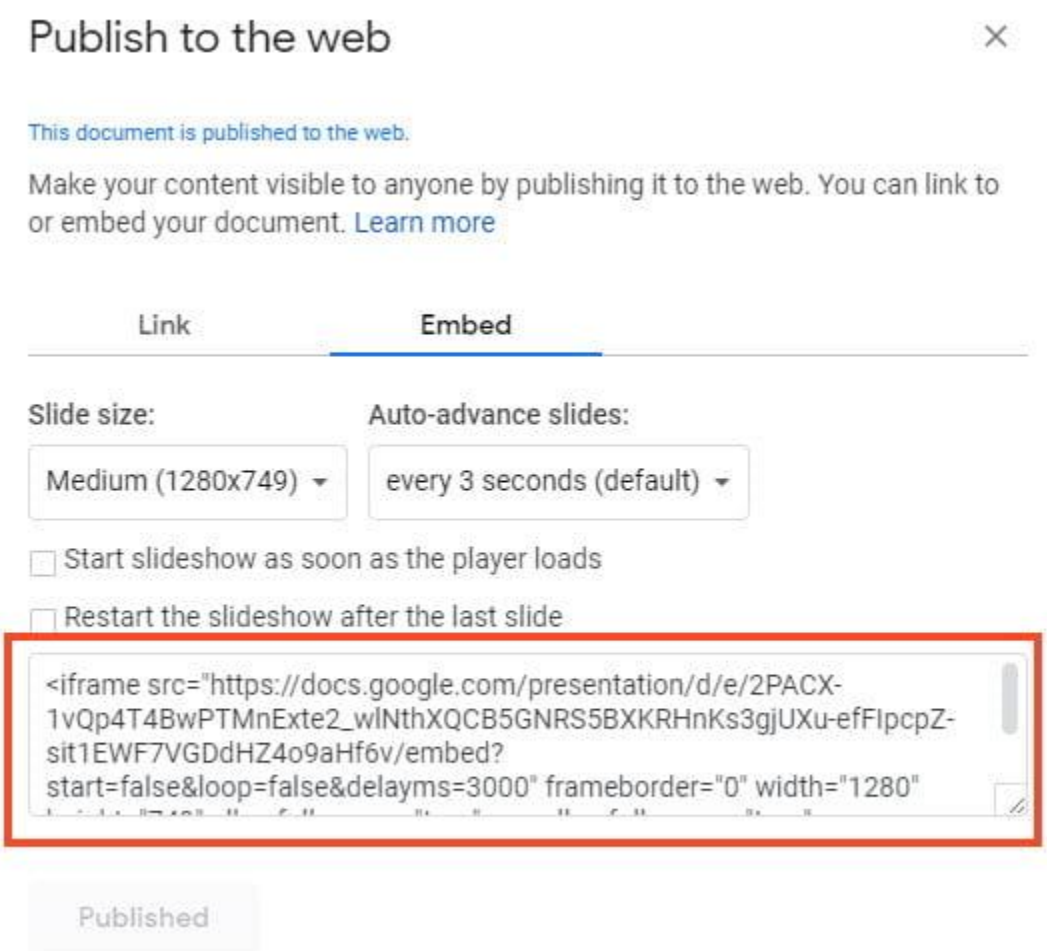
FOLLOW US
@Jeremy
@Troy.Joshua

You'll receive a warning that you're about to publish to the web. Press OK.



After you press OK, your HTML embed code will appear in a box.

Copy the embed code.



Add the Embed Code in place of where the VSL is on your call funnel page.

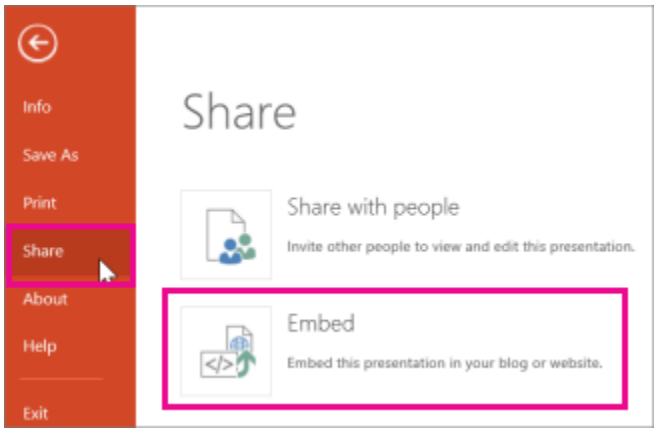
Embed a power point presentation in a web page or blog

When you want to share a presentation or a picture slide show with your friends, family, or colleagues, save it to OneDrive, then you can embed it in a web page or blog.

The embed code you need **must** be gotten from PowerPoint for the web. It isn't available from the PC or Mac versions of PowerPoint.

Get the embed code

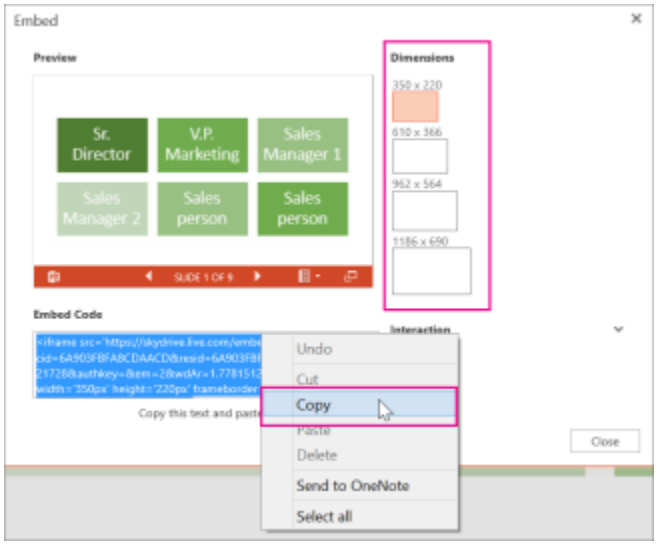
1. Save your presentation to OneDrive.com. (Storing the presentation to a public folder online is what allows you to embed it on a web page.)
2. Open your presentation in PowerPoint for the web. On the **File** tab of the Ribbon, click **Share**, and then click **Embed**.



3. To create the HTML code to embed your file in the web page, click **Generate**

.

4. In the **Embed** box, under **Dimensions**, select the correct dimensions for the blog or web page.



5. Under **Embed Code**, right-click the code, click **Copy**, and then click **Close**. You'll use this embed code in the next procedure. You may want to paste it somewhere handy, like Notepad, so that you don't lose it.

Step 3: Promote the DSL Call Funnel leveraging proven direct response advertising strategies optimizing the campaigns for Schedule or Complete Registration for best results. You can also leverage content first advertising strategies like [The Venus Fly Trap](#).

Benefits of the DSL Funnel Strategy:

- Increases play rates by replacing traditional VSL videos with an embedded deck sales letter, allowing consumers to consume the sales presentation at their own pace.
- Suitable for a wide range of businesses, including personal brands, ecommerce stores, lead gen businesses, service businesses, funds and firms raising money, and anyone with high-quality social media content.
- Consumer gets to go through the presentation at their own pace, drastically increasing sales message consumption prior to scheduling a call.
- Provides a clear call-to-action on the final slide, making it easy for leads to schedule a call or apply.
- Allows for easy testing and optimization of different elements of the deck and application page to improve conversion rates.
- The strategy uses mini webinar 1.0 or 2.0 depending on your business type, which effectively communicates the value of your product or service, also ensuring that the deck is visually appealing and easy to navigate.
- The process is easy to implement, and the strategy is supported by various mini webinar templates and examples that can be easily edited to fit your business needs.

Pro Tips:

You can use Tome.app to leverage AI to help create the presentation deck if you don't want to build from the mini webinar 1.0 or mini webinar 2.0 - this tool leverages GPT-3 AI to have you input ideas and then it outputs full slides with visuals as well. The output the tool produces is as good as the input you provide.

Another way to have GPT-3 from OpenAI help you with the deck is to leverage ChatGPT. With ChatGPT you can copy the content from an example slide and enter your general info you want on that slide, and then command ChatGPT to produce the content for the slide for you.

Here's an example of that on the next page:

I want you to make a slide for a presentation deck based on the example information I've provided below and my input for what needs to be in place of the example.

My input I need on the slide: my offer helps businesses make more money by helping them advertise with proven strategies to drive qualified leads to their sales team and to make online sales for lower ticket offers.

the example from the example slide deck: Put The Explanation Of How What You Do Works Here, An Example:
If we're selling trucking automation here, we're going to explain how trucking automation works "we find a truck, hire a driver, broker the freight, and get the truck on the road making money."

My Offer:

Helping businesses make more money through effective advertising strategies.

Our approach includes:
-Driving qualified leads to the sales team
-Increasing online sales for lower ticket offers

Example:
Our proven strategies allow businesses to advertise in a way that effectively generates leads and online sales, ultimately resulting in increased revenue.

You can also have it write the slide deck in the voices of famous and well documented copywriters or marketers who have a high volume of their work online.

Just tell ChatGPT to 'rewrite the previous answer in the voice of [enter your favorite copywriter]'
